DUAL HEATING TECHNOLOGY

Meet the Flowermate Cross. The Cross is the successor to the versatile Flowermate Hybrid X Vaporizer, the all-in-one solution for those who are looking for ra unit that can handle herbs as well as concentrate. Improvements for the cross include the special concentrate heating chamber and haptic feedback.

What's In The Box

1 x Flowermate Cross Dual-function Vaporizer
1 x Carry Pouch
1 x USB Charging Cable
1 x Band and Snap Dab Tools Card
1 x Glass Mouthpiece
1 x Cleaning Brush
1 x Warranty Card
1 x Quick Guide (users manual)
4 x Replacement Silicone O-rings
5 x Replacement Stainless Steel Screens

How To Use The Flowermate Cross

Your vaporizer will come charged in the box, however, it is best practice to put it on the charger before the first use. You'll find the USB port on the concentrate chamber end of the vape. Plug it in and let it charge fully.

Once your Cross is fully charged, it is time to load your chamber. You can vaporize dry herbs or concentrates.

To change between Celsius and Farenheight, simply press both, the + and – buttons at the same time for a second or so.

I'll go through both processes one by one. Let's start with vaping dry herbs

Vaporizing Dry Herbs

First up, open the herb chamber and pack your dry ground herbs. The herb chamber is marked with a cannabis leaf icon and has holes on the bottom. Don't pack the chamber too tight, make sure you allow for the mouthpiece base on the top.

Once you packed your dry herbs, turn your vaporizer on by pressing the power button 5 times in a row. You'll hear a short 1-second vibration as your vape turns on. The OLED display is on the herb chamber side. After turning the vaporizer on, it will give you the option to choose which chamber to heat up.

Toggle to the herb icon using the + and – buttons and press the power button twice in a row. Finally set your desired temperature and wait for about 30 seconds for the vaporizer to heat up.

You'll see the battery level, temperature and a 5 minutes session timer on the digital display. After your 5 minutes session is up, the Cross will shut off automatically. You can simply press the button 5 times again and start from the beginning.

Vaporizing Concentrates

Open the wax chamber and add about a rice grain size concentrate into your chamber. Remember, your concentrate chamber has no holes on the bottom.

Once you are done adding your concentrate, press the power button 5 times in a row to turn the device on. The Cross will vibrate once powered up and offer you to choose which chamber to heat. Navigate to the wax icon using the + or – button and press the power button twice in a row.

As soon as you've done that, you'll see a red dot flashing on the screen on the wax chamber side.

The red dot is indicating that the chamber is heating up. It turns to green and the Cross vibrates in a few seconds to let you know its ready to go. Press the power button and inhale while you are pressing it.

As opposed to vaping dry herbs, you have to press the power button while you are vaping concentrates. You have a 15 seconds window before the heating element cuts off. You can simply press and hold the button again to keep vaping.

SPECIFICATIONS

Dry Herb Chamber

Heating Element	Ceramic Heating Chamber
Temperature Range	93 – 220±10°C (200°F-428°F)
Session Length	5 Minutes
