

FENiX PRO

USER MANUAL

The FENiX line is one of the most trusted names in the world of vaporizers, and the 7th generation Pro might be the best one yet. This sleek, powerful portable vaporizer combines high-tech features with a rugged German design. Featuring precision temperature controls and an easy to clean body, it has everything a true vape aficionado could want.

The designers of the Pro also paid attention to the little details that elevate your vape experience from good to great. As a result, the Pro boasts a fast heat up time, an adjustable session timer, and haptic feedback sensors that make it easy to know what's going on with your vape. Add it all together and the end result is an exceptional device

Technical Specifications

Dimensions:

5.2 cm x 2.5 cm x 8.4 cm

Battery Size:

2300mAh

Adjustable Temperature:

Yes

Charging Time:

120 minutes

Temperature Range:

160°-221° C

Voltage:

5V - 1.5A

Duration of Sessions:

180-360 seconds

What's in the Box FENiX Pro Vaporizer

Mouthpiece O-Ring and Screen
Air Path Cleaning Brush
Herb Chamber Cleaning Brush
Herb Chamber Cleaning Stick
USB Cable
User Manual

Directions for use of the Fenix Pro Vaporizer :

The chamber/bowl is reached by simply sliding the mouthpiece.

Fill the bowl without tamping it for optimal results. This allows the hot air to pass through evenly and mix your plants easily during the session.

Once the bowl is filled and closed:

5 successive presses turn on the Fenix Pro vaporizer and start the heating process. It will start a 4 minute cycle before automatically shutting off

The OLED display shows the current temperature and the selected temperature.

You can then inhale

Remember, as with any vaporizer, the softer you suck, the bigger the slat you get, the harder you suck, the smaller the slat you get because the air hasn't had time to warm up and it cools the bowl

Your Fenix Pro vaporizer will stay on for 4-7 minutes before turning off, and a second counter will count down on the OLED screen

Your battery level and set temperature are also displayed on the OLED screen

To restart your vaporizer, 5 successive presses are enough.

The battery status is shown next to the heating time and temperature on the OLED display.

To change the ignition time, press and hold the ON button until you see the SET indication, then press the + or - button to increase or decrease the time between 180 and 360 seconds.

To check the battery status when your Fenix Pro vaporizer is turned off, just press the ON button briefly.

To know when your session is over, your herbs no longer emit vapor or taste at the maximum temperature of 221°C on this vaporizer. As a rule of thumb, it takes two to three sessions at the maximum temperature to finish a dose, which is 8 to 12 minutes, making the Fenix Pro an efficient vaporizer in terms of extraction.

Battery Life:

The Fenix Pro has managed between 4-6 sessions in our tests before we had to recharge it. The Fenix Pro cannot be used and charged at the same time (pass through). The battery is firmly installed and thus cannot be changed. It has a capacity of 2300 mAh and a micro-USB connection. This is usually enough for a relaxed afternoon with friends.

Cleaning & Care:

The Fenix Pro can also score here with well thought-out design. The mouthpiece can be cleaned completely. You can also completely clean the vapor path of the vaporizer (ECA). All you have to do is to push the screen and the cooling coil with the magnetic chamber rod out of the chamber from below. Now you can clean the entire vapor path with the brush provided.
